COVER LETTER

To the manager,

I am a third-year undergraduate currently completing a Bachelor of Computer Science at the University of Newcastle. In addition to the course work, I have completed an internship at *BMT Tax Depreciation Quantity Surveyors* and am currently employed at *Berendsen Fluid Power (BFP)*. Both of these roles are focused on software development.

At *BMT*, my interest in software expanded into a passion for systems development. The role offered experience in database management with SQL, web design and app/program development (desktop and smart device), front-end and back-end. I have a particular interest in large-scale systems.

My current role at *BFP* has offered even more experience with large-scale system development. I am required to assist with the software development of *BFP*'s 9 nationwide branches, *CCA Hardchrome* in Sydney and *Hardchrome Sales* in Perth. This still includes app development, report generation and database management for all popular computing devices.

Although my previous work as a chef may seem incompatible with software development, I believe that the field has greatly enhanced my skills in focus, organisation, teamwork and dealing calmly with high-pressure situations.

Thanks for your consideration,
Sam
