### Larson Project Management

# Chapter 2 Modern project management

Project Management Stuff at CafePress.com

#### **Last Week and This Week**

- Last week Ch1 & CH17
  - Important factors in project success
  - Portfolio Management
  - Communication (eg Team M3B)
  - PM's alignment to Organisational Strategy
  - Traditional vs. Agile methods
- This Week Ch2
  - Organisation Strategy
    - Implementation through Projects and the importance of Projects supporting it
  - Project Selection

#### **Strategy**

- Is basically deciding how an organisation will compete
  - Projects are the implementation of strategy
  - Projects therefore must support organisational strategic goals
  - The Strategy/Project alignment is difficult to maintain
    - Project manager should think and act strategically
    - Requires attention from middle and senior management

#### The importance of strategy

- Changes in the organisation's mission and strategy:
  - Project managers must respond to changes with appropriate decisions about future projects and adjustments to current projects.
  - Project managers who understand their organisation's strategy can become effective advocates of projects aligned with the firm's mission.

#### **Projects and strategy**

- Mistakes caused by not understanding the role of projects in accomplishing strategy:
  - focusing on problems or solutions with low strategic priority
  - focusing on the immediate customer rather than the whole market place and value chain
  - over-emphasising technology that results in projects that pursue exotic technology that does not fit the strategy or customer need
  - trying to solve customer issues with a product or service rather than focusing on the 20% with 80% of the value (Pareto's Law)
  - engaging in a never-ending search for perfection that only the project team really cares about

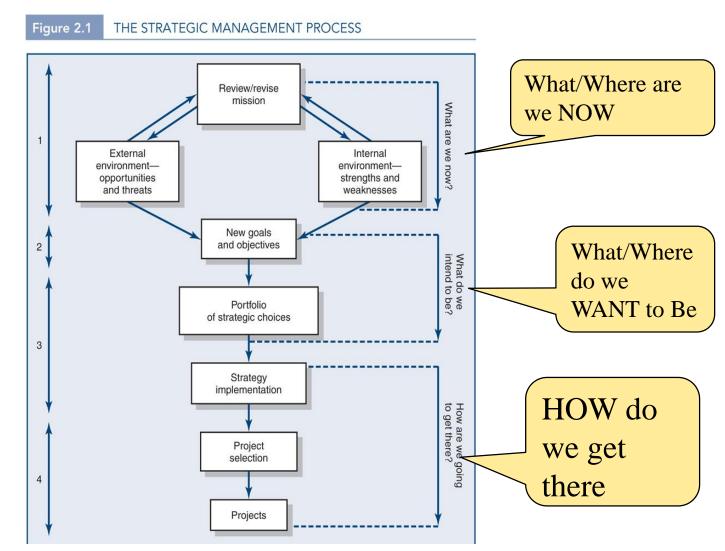

### The strategic management process: an overview

- Strategic management:
  - requires every project to be clearly linked to strategy
  - provides a theme and focus of organisational future direction. Two major dimensions are:
    - responding to changes in the external environment environmental scanning in dynamic and competitive environments
    - allocating scarce resources of the firm to improve its competitive position (internal responses to new programs)
  - requires strong links among mission, goals, objectives, strategy and implementation

#### The strategic management process

### The strategic management process: Four Activities

- 1. Review and define the organisational mission.
- 2. Set long-range goals and objectives.
- 3. Analyse and formulate strategies to reach objectives.
  - Objectives should be Measurable => SMART
- 4. Implement strategies through projects

2-9

#### **Mission statement**

- The Mission Statement sets the parameters for developing objectives and must be clear and concise
  - **e.g.** http://retailindustry.about.com/od/retailbestpractices/ig/Company-Mission-Statements/Microsoft-Mission-Statement.htm
- Identifies and communicates the purpose of the organisation to all stakeholders
- Identifies the scope of the organisation in terms of its product or service
- Provides a focus for decision making
- Used for evaluating organisational performance

# Set long-range goals and objectives

- Translates the mission into specific, concrete and measurable terms (operational if possible)
- Sets targets for all levels of the organisation in a cascaded manner
- Where is an organisation headed and when it is going to get there
- Focus managers on where the organisation should move to

#### Characteristics of objectives

S Specific Be specific in targeting an objective

Measurable Establish a measurable indicator(s) of progress

A Assignable Make the objective assignable to one person

for completion

Realistic State what can realistically be done with

available resources

Time related State when the objective can be achieved,

that is, duration

### Analyse and formulate strategies to meet objectives

- Focuses on what needs to be done to reach objectives
- Realistic view of the past and current position
- Assessment of the internal and external environments (SWOT analysis)
- Alternatives generated and assessed
- Strategy formulation and assignation

### Implementation of strategy through projects

- Focuses on how the strategies will be realised with resources
- Maintain the link between strategy (the 'what') and implementation (the 'how')
- Requires resource allocation
- Requires action and completion of tasks
- Requires prioritisation
  - can require ranking projects

#### Scenario planning

Clarifying your core business and assessing drivers of change in the industry environment

Developing potential scenarios and assessing the impact of STEEP factors

Developing potential contingency strategies and best future strategic options

Identifying
early
indicators
and
establishing
triggers for
strategic
action

We will look at RISK in more detail later in the course

# Benefits of project portfolio management

- Builds discipline into the project selection process
- Links project selection to strategic metrics
- Prioritises project proposals across a common set of criteria, rather than on politics or emotion
- Allocates resources to projects that align with strategic direction
- Balances risk across all projects
- Justifies stopping projects that do not support strategy
- Improves communication and supports agreement on project goals

### Problems with project portfolio management

- The implementation gap
  - The lack of understanding and consensus on strategy among top management and middle-level (functional) managers who independently implement the strategy
- Organisational politics
  - Project selection is based on the persuasiveness and power of people advocating the projects
- Resource conflicts and multitasking
  - Multiproject environment creates interdependency relationships of shared resources which results in the starting, stopping and restarting of projects

### A portfolio management system

- Design of a project portfolio system
  - Classification of a project
  - Selection criteria depending upon classification
  - Sources of proposals
  - Evaluating proposals
  - Ranking proposals
  - Managing the portfolio of projects

#### Portfolio of projects by type

Figure 2.2

PORTFOLIO OF PROJECTS BY TYPE

#### PROJECT SELECTION

Which One??

Limitations of Resources:

Time, Money, Personnel, Skills, Equipment,....

### A portfolio management system continued

- Selection criteria
  - Financial: payback, net present value (NPV), internal rate of return (IRR)
  - Non-financial: projects of strategic importance to the firm
- Multi-weighted scoring models
  - use several weighted selection criteria to evaluate project proposals

#### Financial Analysis of Projects

- Financial considerations are often an important aspect of the project selection process.
- Three primary methods for determining the projected or estimated financial value of projects:
  - Payback analysis
  - Net present value (NPV) analysis
  - Return on investment (ROI)

#### Payback Analysis

A simple financial consideration is *payback analysis*.

- The payback period is the amount of time it will take to recoup, in the form of net cash inflows, the total dollars invested in a project.
- Payback occurs when the *cumulative discounted* benefits and *costs* reach zero.
- Many organisations want projects to have a fairly short payback period Why?

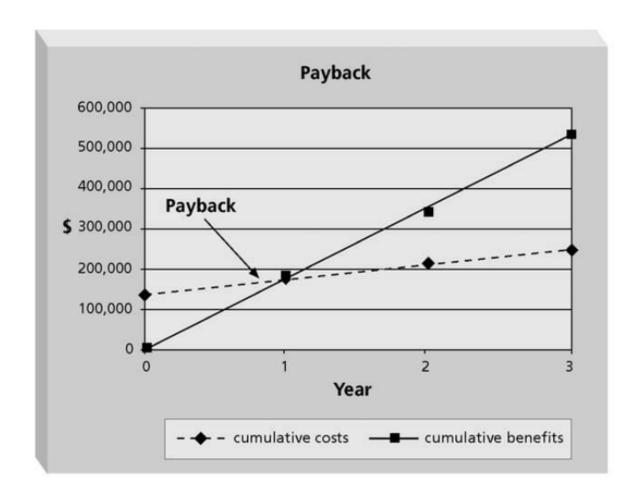

#### **Financial models**

#### The payback model:

- measures the time the project will take to recover the project investment
- uses more desirable, shorter paybacks
- emphasises cash flows, a key factor in business

#### **Charting the Payback Period**

#### **Financial models**

#### Limitations of the payback model - It:

- ignores the time value of money
- assumes cash inflows for the investment period only (and not beyond)
- does not consider profitability

### Exhibit 2.3A: Comparing two projects using the payback method

(example uses a minimum acceptable rate of return of 15%)

#### **Net Present Value Analysis**

Net present value (NPV) analysis is a method of calculating the expected net monetary gain or loss from a project by discounting all expected future cash inflows and outflows to the present point in time.

- Projects with a positive NPV should be considered (<u>if financial value</u> is a key criterion)
- The higher the NPV, the better.

 $NPV = \sum_{t=1...n} A/(1+r)^{t}$ 

#### **NPV Calculations**

- 1. Determine the *estimated* costs and benefits for the life of the project and the products it produces.
- 2. Determine the *discount rate* the rate used in discounting future cash flow (check with your organisation on what to use).
- 3. *Calculate* the NPV

#### Financial models continued

- The net present value (NPV) model:
  - uses management's minimum desired rate-of-return (the discount rate) to compute the present value of all net cash inflows
    - Positive NPV: project meets minimum desired rate of return and is eligible for further consideration
    - Negative NPV: project is rejected

Project NPV = 
$$I_0 + \sum_{t=1}^{n} \frac{F_t}{(1+k)^t}$$
 where

 $I_0$  = Initial investment (since it is an outflow, the number will be negative)

 $F_t$  = net cash inflow for period t

k =required rate of return

# Exhibit 2.3B: Comparing two projects using net present value method and the Excel NPV formula

#### **NPV Example**

### (calculating NPV from discounted inflows and outflows, ie not using Excel NPV formula)

| Multiply         |
|------------------|
| by the           |
| discount         |
| factor each      |
| year to get      |
| discounted costs |
| and benefits,    |

then subtract discounted costs from discounted benefits to get the NPV

| Discount rate               | 8%                |          |         |                   |         |              |
|-----------------------------|-------------------|----------|---------|-------------------|---------|--------------|
| Assume the project is comp  | leted in Ye       | ar 0     | Year    |                   |         |              |
|                             | 0                 | 1        | 2       | 3                 | Total   |              |
| Costs                       | 140,000           | 40,000   | 40,000  | 40,000            |         |              |

#### **Net Present Value Example**

|    | Α             | В                        | С         | D       | E       | F       | G        |
|----|---------------|--------------------------|-----------|---------|---------|---------|----------|
| 1  | Discount rate | 10%                      |           |         |         |         |          |
| 2  |               |                          |           |         |         |         |          |
| 3  | PROJECT 1     | YEAR 1                   | YEAR 2    | YEAR 3  | YEAR 4  | YEAR 5  | TOTAL    |
| 4  | Benefits      | \$0                      | \$2,000   | \$3,000 | \$4,000 | \$5,000 | \$14,000 |
| 5  | Costs         | \$5,000                  | \$1,000   | \$1,000 | \$1,000 | \$1,000 | \$9,000  |
| 6  | Cash flow     | (\$5,000)                | \$1,000   | \$2,000 | \$3,000 | \$4,000 | \$5,000  |
| 7  | NPV           | \$2,316                  |           |         |         |         |          |
| 8  |               | Formula:                 | =npv(b1,b | 6:f6)   |         |         |          |
| 9  |               |                          |           |         |         |         |          |
| 10 | PROJECT 2     | YEAR 1                   | YEAR 2    | YEAR 3  | YEAR 4  | YEAR 5  | TOTAL    |
| 11 | Benefits      | \$1,000                  | \$2,000   | \$4,000 | \$4,000 | \$4,000 | \$15,000 |
| 12 | Costs         | \$2,000                  | \$2,000   | \$2,000 | \$2,000 | \$2,000 | \$10,000 |
| 13 | Cash flow     | (\$1,000)                | \$0       | \$2,000 | \$2,000 | \$2,000 | \$5,000  |
| 14 | NPV           | -\$3,201                 |           |         |         |         |          |
| 15 |               | Formula =npv(b1,b13:f13) |           |         |         |         |          |
| 16 |               |                          |           |         |         |         |          |

Note that totals are equal, but NPVs are not because of the *time value* of money.

#### **Return on Investment**

 Return on investment (ROI) is calculated by subtracting the discounted project costs from the benefits and then dividing by the costs.

ROI = (total discounted benefits - total discounted costs)
total discounted costs

- The *higher* the ROI, the better.
- Many organisations have a <u>required</u> rate of return or minimum acceptable rate of return on investment for projects.
  - This <u>differentiates</u> it from NPV as a financial feasibility factor

#### **ROI Example**

| Discount rate               | 8%            |          |         |         |         |              |
|-----------------------------|---------------|----------|---------|---------|---------|--------------|
| Assume the project is comp  | leted in Ye   | ar 0     | Year    |         |         |              |
|                             | 0             | 1        | 2       | 3       | Total   |              |
| Costs                       | 140,000       | 40,000   | 40,000  | 40,000  |         |              |
| Discount factor             | 1             | 0.93     | 0.86    | 0.79    |         |              |
| Discounted costs            | 140,000       | 37,200   | 34,400  | 31,600  | 243,200 |              |
|                             |               |          |         |         |         |              |
| Benefits                    | 0             | 200,000  | 200,000 | 200,000 |         |              |
| Discount factor             | 1             | 0.93     | 0.86    | 0.79    |         |              |
| Discounted benefits         | 0             | 186,000  | 172,000 | 158,000 | 516,000 |              |
|                             |               |          |         |         |         |              |
| Discounted benefits - costs | (140,000)     | 148,800  | 137,600 | 126,400 | 272,800 | <b>←</b> NPV |
| Cumulative benefits - costs | (140,000)     | 8,800    | 146,400 | 272,800 |         |              |
|                             |               | <b>+</b> |         |         |         |              |
| ROI —                       | <b>→</b> 112% |          |         |         |         |              |
|                             | ear 1         |          |         |         |         |              |

ROI = (516000 - 243200) / 243200 = 112.171053%

#### Non-financial strategic criteria

- To capture larger market share
- To make it difficult for competitors to enter the market
- To develop an enabler product, which by its introduction will increase sales in more profitable products
- To develop core technology that will be used in next-generation products
- To reduce dependency on unreliable suppliers
- To prevent government intervention and regulation

#### Multicriteria selection models

- Checklist model:
  - uses a list of questions to review potential projects and to determine their acceptance or rejection
- Multiweighted scoring model:
  - uses several weighted qualitative and/or quantitative selection criteria to evaluate project proposals

## Sample selection questions

| Topic                | Question   |
|----------------------|--|
| Strategy/alignment   | What specific strategy does this project align with?     |
| Driver               | What business problem does the project solve?            |
| Success metrics      | How will we measure success?                             |
| Sponsorship          | Who is the project sponsor?                              |
| Risk                 | What is the impact of not doing this project?            |
| Risk                 | What is the project risk to our organisation?            |
| Risk                 | Where does the proposed project fit in our risk profile? |
| Benefits, value, ROI | What is the value of the project to this organisation?   |
| Benefits, value, ROI | When will the project show results?                      |
| Objectives           | What are the project objectives?                         |

#### Sample selection questions continued

| Topic                | Question  |
|----------------------|---|
| Organisation culture | Is our organisation culture right for this type of project? |
| Resources            | Will internal resources be available for this project?      |
| Approach             | Will we build or buy?                                       |
| Schedule             | How long will this project take?                            |
| Schedule             | Is the time line realistic?                                 |
| Training/resources   | Will staff training be required?                            |
| Finance/portfolio    | What is the estimated cost of the project?                  |
| Portfolio            | Is this a new initiative or part of an existing initiative? |
| Portfolio            | How does this project interact with current projects?       |
| Technology           | Is the technology available or new?                         |

#### **Project screening matrix**

#### Multicriteria selection models

- Checklist model:
  - uses a list of questions to review potential projects and to determine their acceptance or rejection
  - fails to answer the relative importance or value of a potential project and doesn't to allow for comparison with other potential projects
- Multiweighted scoring model:
  - uses several weighted qualitative and/or quantitative selection criteria to evaluate project proposals
  - allows for comparison of projects with other potential projects

### Applying a selection model

- Project classification
  - Deciding how well a strategic or operations project fits the organisation's strategy
- Selecting a model
  - Applying a weighted scoring model to bring projects to closer alignment with the organisation's strategic goals:
    - reduces the number of wasteful projects
    - helps identify proper goals for projects
    - helps everyone involved understand how and why a project is selected

#### Project number

| Must objectives  | Must meet if impacts   | 26  | 27 | 28 | 29 |
|--|--|-----|----|----|----|
| All activities meet current legal, safety, and environmental standards | Yes-Meets objective<br>No-Does not meet obj<br>N/A-No impact | n/a |    |    |    |
| All new products will have a complete market analysis                  | Yes-Meets objective<br>No-Does not meet obj<br>N/A-No impact | yes |    |    |    |
| environmental standards  All new products will have a complete market  | N/A-No impact Yes-Meets objective No-Does not meet obj       |     |    |    |    |

| Total weighted score                          |                                 |  |                   |                |                |                   |
| Priority                                      |                                 |  |                   |                |                |                   |

FIGURE 2.6

#### **Project proposals**

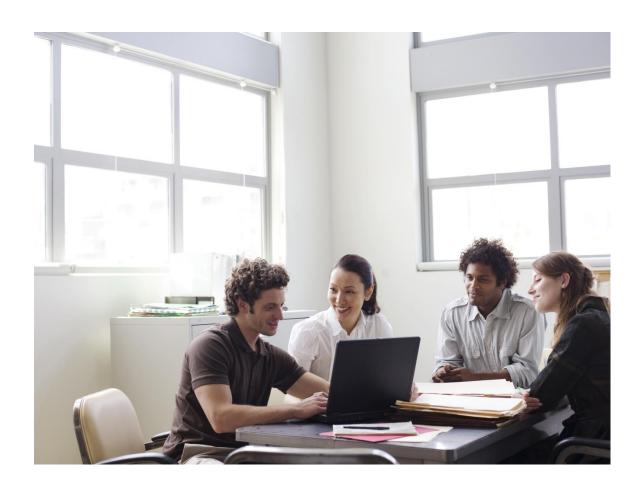

- Sources and solicitation of project proposals
  - Within the organisation
  - Request for proposal (RFP) from external sources (contractors and vendors)
- Ranking proposals and selection of projects
  - Prioritising requires discipline, accountability, responsibility, constraints, reduced flexibility, and loss of power
- Managing the portfolio
  - Senior management input
  - The priority team (project office) responsibilities

### Managing the portfolio

- Senior management:
  - provide guidance in selecting criteria that are aligned with the organisation's goals
  - decide how to balance available resources among current projects
- The priority team:
  - publishes the priority of every project
  - ensures that the project selection process is open and free of power politics
  - reassesses the organisation's goals and priorities
  - evaluates the progress of current projects

#### **Project teams**

Open and regular communication on project selection criteria, process and transparency helps project teams with priorities.

# Project relativity matrix dimensions

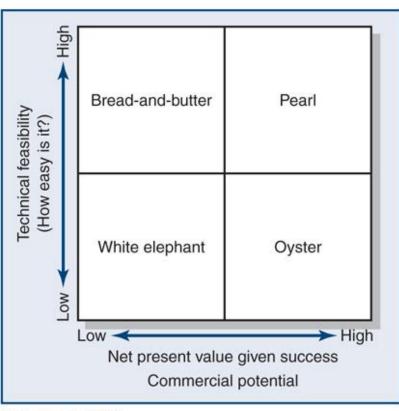

- Bread-and-butter projects:
  - involve evolutionary improvements to current products and services
- Pearls:
  - represent revolutionary commercial opportunities using proven technical advances
- Oysters:
  - involve technological breakthroughs with high commercial payoffs
- White elephants:
  - showed promise at one time but are no longer viable

| Project Proposal Form   |
|---|
| Date: Jan 22, 2xxx Proposal # 11 Sponsor J. Moran   |
| Project classification?   |
| Strategic Infrastructure X Compliance   |
|   |
| What business problem does the project solve?   |
| Increase customer satisfaction through keosk and web site for bus, streetcar, and fast rail Enhance driver and traveler safety  Hyperlink to: AVL.tri-met.org |
| How does this project align with our organization strategy?   |
| Increase customer ridership through better passenger travel planning & scheduling decisions   |
| Faster response to accidents  |
| What are the major deliverables of the project?   |
| What are the major deliverables of the project?   |
| GPS vehicle tracking system, internet access, Schedule screen,  |
| Confedence Constant,  |
| What is the impact of not doing this project?   |
|   |
| Not meeting ridership goals   |
|   |
| What are the three major risks for this project?  |
| Cost overruns Integration of fast rail, bus, and streetcar systems  |
| Hacking system  |
| How will we measure success? Increased ridership  |
| Customer satisfaction   |
| Meeting budget and schedule   |
|   |
| Yes X No Will this project require internal resources? Yes X No Available?  |
| What is the estimated cost of the project? \$ \$10 million  |
|   |
| How long will this project take? 22 Weeks   |
|   |
| Oversight action: Accept X Return   |
| Signature XXXXXX Date: Oct. 7, 2xxx   |

A Proposal Form for an Automatic vehicular tracking (AVL) Public Transportation Project
