Inft1004 Visual Programming – Lab for week 11

1. Do the quiz for week 11. (Under the "Assessment/Quizzes" folder on blackboard)

   NOTE: E – Easy, M – Medium, H – Hard, T – Tricky

2. (M) Write a function called
   ```
   joinSounds(sound1, sound2)
   ```

   This function takes two sounds and joins them into one long sound. There are no side effects.

3. (T) Write a function that creates a short animation of a bouncing green ball.

4. (T) Write a function that creates a movie shows a picture being turned upside down. Each frame should show two rows at a time being swapped over (for example one row at the top being swapped with one row at the bottom). Be careful – this could be a lot of frames if you choose a high picture. (How many frames?)
